5 JAN 1968

Preliminary readings of the seismograms in the Danish network. These readings are distributed once a week giving arrival time (GMT) of P or PKP phases. PP can be mistaken as a P. If clear, S or SKS are also given. If possible, the direction of first motion is given - C for up, D for down. The information on the first phases are supplemented by reading on the SPZ instrument of the double trace amplitude in mm, designated by a. the corresponding full period in seconds is preceded by t.

The stations are equipped with at least the WWSS-instruments i.e. 3-component 1 sec. Benioff - 0.75 sec. galvo and 3-component 15 sec. Press-Ewing - 100 sec. galvo.

The readings from the stations in Greenland are read in Greenland and transmitted by cable to this office.
