

SECRETARIA DE INDUSTRIA, COMERCIO Y TRABAJO

DEPARTAMENTO DE EXPLORACIONES Y ESTUDIOS GEOLOGICOS

Jefe del Departamento y Director del Instituto Geológico, Ing. LEOPOLDO SALAZAR SALINAS

INSTITUTO GEOLOGICO DE MEXICO

CATALOGO DE LOS TEMBLORES

REGISTRADOS EN LA RED SEISMOLOGICA MEXICANA

DURANTE EL AÑO DE 1920

TACUBAYA, D. F. MEXICO

IMP. DE LA DIRECCION DE ESTUDIOS GEOGRAFICOS Y CLIMATOLOGICOS

1923

ADVERTENCIA

Ya en el Boletín número 18 del Instituto Geológico, se ha dicho algo sobre la reorganización del Servicio Seismológico de México, pero por la circunstancia de que no todas las Estaciones Seismológicas del Mundo reciben esa publicación y por solicitar con frecuencia datos sobre seismología de nuestro País, diremos algunas palabras sobre nuestra Red.

El Servicio Seismológico quedó establecido definitivamente el año de 1910, y desde este año hasta el de 1915, funcionó como dependencia del Instituto Geológico. Hasta entonces se tenían establecidas Estaciones en Guadalajara, Mazatlán, Mérida, Monterrey, Oaxaca y Zacatecas, además de la Central en Tacubaya, D. F. Del tiempo comprendido entre 1910 y 1915, se tienen publicados los catálogos de temblores registrados en la Red, referentes a los años de 1909, 1910, 1911 y 1912, estando a la disposición de quien los solicite.

El día 5 de noviembre de 1915, el Servicio Seismológico pasó a depender del Observatorio Meteorológico, por un acuerdo del Ministerio de Fomento. En este año los acontecimientos políticos se acentuaron de tal manera, que casi fue imposible tener datos de observación en las diferentes ciencias, y, por esta misma razón, los catálogos de temblores referentes a los años de 1913, 1914 y 1915, no pudieron publicarse. Esta publicación contiene los catálogos de 1920, en que el Servicio Seismológico volvió a ser dependencia del Instituto Geológico.

Por la destrucción de algunas de las Estaciones Seismológicas, el servicio quedó reducido en 1920, a tres solamente, siendo: la Central, la de Mazatlán y la de Oaxaca. Estas dos últimas funcionaban tan mal, que ni aun de macroseismos se obtenían registros. Por esta razón, de 1915 a 1920 sólo deben aceptarse los datos proporcionados por la Estación Central, como se ha manifestado cuando en solicitud de datos han escrito del extranjero; estos catálogos de 1916 a 1920 se han publicado en el Boletín del Observatorio Meteorológico.

El día 3 de enero de 1920, se sintió en México un fuerte temblor cuyo foco quedó localizado entre el Cofre de Perote y el Pico de Orizaba, con los registros de los seismógrafos de la Estación Central. Con este motivo, se resolvió que el Servicio Seismológico volviera a depender del Instituto Geológico, pues de manera evidente se comprobó una vez más la relación estrecha que une a la Seismología con la Geología.

A partir del año de 1920, el Servicio Seismológico ha recibido un gran impulso, pues la Dirección del Instituto Geológico se ha propuesto mejorarlo hasta donde los recursos actuales lo permiten. Desde luego se inspeccionaron las Estaciones de Mazatlán y Oaxaca, quedando los instrumentos al corriente, y en los edificios de ambas se hicieron algunas reparaciones.

Se instaló una Estación de tercer orden en el Colegio Civil de Puebla; una en el Puerto de Veracruz; se reinstaló la de primer orden en Mérida, donde hubo que hacer reparaciones

costosas al edificio; y se instaló un Observatorio Seismo-vulcanológico en la falda del Popocatepetl para estudiar la fase eruptiva por la cual ha poco pasó.

En consecuencia, el Servicio Seismológico cuenta a la fecha con las Estaciones siguientes:

| | |
|-----------------|------------------|
| TACUBAYA, D. F. | (Central). |
| MERIDA. | (Primer orden). |
| COLIMA. | |
| MAZATLAN. | (Segundo orden). |
| OAXACA. | |
| VERACRUZ. | |
| PUEBLA. | (Tercer orden). |

Se tiene proyectado establecer otras en algunos puntos del país, de tal manera que se puedan conocer las zonas sísmicas de nuestro territorio y la influencia de la topografía, la tectónica y la Geología de cada localidad.

Además de los catálogos de temblores, el Instituto Geológico ha publicado algunos estudios sobre seismología, tales como "Los temblores de Zanatepec", por E. Bose; "El Volcán Jorullo", por A. Villafaña; "Descripción Histórica de la Red Seismológica", por M. Muñoz Lumbier; "La Zona Megasísmica Acambay-Tixmadeje", por F. Urbina y H. Camacho; "La Seismología en México hasta 1917", por M. Muñoz Lumbier; "Los temblores de Guadalajara en 1912", por Paul Waitz y F. Urbina; "Los temblores de Guatemala", por M. Muñoz Lumbier; y está en prensa el estudio relativo al temblor mexicano del 3 de enero de 1920, y el de la última erupción del volcán Popocatepetl.

La Dirección del Instituto Geológico, procura que México cumpla con el compromiso contraído con la Asociación Internacional de Seismología y a ello tienden actualmente sus esfuerzos.

México, septiembre 9 de 1922.

MANUEL MUÑOZ LUMBIER,

Inspector del Servicio Seismológico.

ESTACION SEISMOLOGICA CENTRAL

TACUBAYA, D. F.

REPUBLICA MEXICANA

Coordenadas: Latitud N., 19°24'18"; Longitud, 99°11'37" W. de Greenwich.—Altitud, 2,320 metros.

DIRECTOR, Ing. L. Salazar Salinas.

JEFE DE LA SECCION DE SEISMOLOGIA Y VULCANOLOGIA, Ing. H. Camacho.

INSPECTOR DEL SERVICIO SEISMOLOGICO, M. Muñoz Lumbier.

JEFE DE LA ESTACION CENTRAL, Ing. F. Patiño Ordaz.

PRIMER SEISMOLOGISTA,

ENCARGADO DE LOS PABELLONES, Mariano Gutiérrez.

Instrumentos: Seismógrafos horizontales Wiechert de 17,000, 1,200 y 200 kilogramos.—Seismógrafos verticales Wiechert de 1,300 y 80 kilogramos.—Péndulos Bosch-Omori de 10 kilogramos.—Péndulos Bosch, fotográficos, de 200 gr.—Gravímetro trifilar Schmidt.—Tromómetro Wiechert-Mintrop.

DIRECCION POSTAL

Instituto Geológico Nacional.

6a. del Ciprés, núm. 176.—México, D. F.

NOTACION USADA

Coordenadas: φ Latitud; λ Longitud de Greenwich; α Altitud.

CARACTER DEL TEMBLOR

I—perceptible; **II**—notable; **III**—muy notable.

d—terrae motus domesticus—temblor local a menos de 100 kilómetros.

V—terræ motus vicinus—plesioseismo—temblor vecino, cercano, o a menos de 1000 kilómetros.

I—terræ motus remotus—telescismo—temblor lejano, de 1000 a 5000 kilómetros.

U—terræ motus ultimus—temblor muy lejano a más de 5000 kilómetros.

FASES

P—undæ primæ—primeros tremors (ondas longitudinales).

S—undæ secundæ—segundos tremors (ondas transversales).

PR_n—ondas primeras reflejadas **n** veces.

SR_n—ondas segundas reflejadas **n** veces.

PS—ondas que por reflexión cambian su carácter de longitudinales en transversales o recíprocamente.

L—undæ longæ—porción principal (ondas largas).

M—undæ maximæ—movimiento máximo en la porción principal.

C—coda, cola.

F—finis—fin.

NATURALEZA DEL MOVIMIENTO

i—impetus—ímpetu—comienzo brusco claramente definido.

c—emersio—emersión—comienzo gradual más o menos incierto.

?—dudoso.

TIEMPO Y UNIDADES DE MEDIDA

Tiempo—tiempo medio de Greenwich contado de media noche a media noche.

μ—micron 0^{mm}.001.

s—segundos de tiempo.

''—Segundos de arco.

Δg—miligal—0.001 de la unidad de aceleración en el sistema C. G. S.

T—Período de la oscilación completa medida en el diagrama.

T_o—Período muerto del instrumento.

A—amplitud—desviación de la posición del equilibrio.

A_N—amplitud en la componente Norte-Sur.

A_E—amplitud en la componente Este-Oeste.

Z—amplitud en la componente vertical.

ESTACION SEISMOLOGICA DE MAZATLAN

CERRO DE "EL VIGIA"

$\varphi=23^{\circ}11'17''.13$ N. $\lambda=106^{\circ}24'22''$ W. de Greenwich. $a=65^m.00$

Observador, *P. Vázquez Schiaffino*

DOTACION DE INSTRUMENTOS

Un péndulo astático horizontal de 200 kgs. del Profesor E. Wiechert.
Un seismógrafo vertical de 80 kgs. del Profesor E. Wiechert.

ESTACION SEISMOLOGICA DE OAXACA

RANCHO DE SAN MIGUEL

$\varphi=17^{\circ}01'13''.50$ N. $\lambda=96^{\circ}45'46''$.W. de Greenwich. $\alpha=1570^m.85$

Observador, *Alfonso Rueda*

DOTACION DE INSTRUMENTOS

Un péndulo astático horizontal de 200 kgs. del Profesor E. Wiechert.
Un seismógrafo vertical de 80 kgs. del Profesor E. Wiechert.
