PRELIMINARY SEISMOLOGICAL BULLETIN

from October 1, to December 31

1962

Station: Ljubljana - Coordinates: $46^{\circ} 02.6' \text{N}$ Lat.
 $14^{\circ} 32.0' \text{E}$ Long.

Geocentric direction cosines: $a=+ 6743$, $b=+ 1748$, $c=+ 7175$,
 $d=- 8$, $h=- 4$;

Height: 396 m

Lithologic foundation: sandstone (carbon);

Instruments:

Wiechert, horizontal astatic seismograph, $M= 200 \text{ kg}$,
mechanical registration, 14-16 mm/min;
Constants: (15.XI.1962):

Component:	To	v:1	r/T_0^2	v
N-S	4.9	2.7:1	0.019	60
E-W	4.8	2.8:1	0.016	59

Hiller-Stuttgart, vertical component Z with galvanometrical recording; $T_0=1.5 \text{ sec}$, $T_g=1.5 \text{ sec}$, $D_1=D_2=1$, $V_{\max}=10150 \text{ x}$, velocity of registration: 60 mm/min.

Note: Periods of seismic waves are given in seconds, the amplitudes in microns; sign + means compression, movement of ground towards north or east, sign - means dilatation or movement towards south or west. All times given are in GMT. Time signals are received one or two times daily from Pontoise, Potsdam or Moscow and are registered on a chronograph. Wherever possible time readings up to one tenth of a second are given.
